

Bug Report: Notes GUI

Problem Report Number: 001

Reported By: Taehyun Kim

Date Reported: March 24, 2024

Program name: Productivity App – Note component

Release number:

Version identifier:

Configuration:

Report Type: Coding

Can reproduce: Yes

Severity: Low

Priority: Medium

Problem summary: Failure of using OOP.

Key Words: OOP, openNoteWindow, Notes

Problem description and how to reproduce it: Even though there is Notes.java file in components, openNoteWindow from App class uses their own code to make note GUI.

To reproduce, use OOP to prevent the code smell such as Object-Orientation Abusers, or dispensable (dead code, duplicate code).

Suggested fix: Copy all the code from openNoteWindow method from App class, past it on Notes class in components. After that, make new object about Notes into the openNoteWindow.

Status: Open

Resolution:
