

Problem Report Number: 002

Reported By: Taehyun Kim

Date Reported: March 24, 2024

Program name: Productivity App – Note component

Release number:

Version identifier:

Configuration:

Report Type: Design Issue

Can reproduce: Yes

Severity: High

Priority: High

Problem summary: No database connection.

Key words: DB

Problem description and how to reproduce it: There is no database connection. It will create issues when user press the "save" button. Because even though user saves the context, it won't save it to the database, which will result in loss of memory.

Suggested fix: Implement database if there is no database for notes, and then connect them so user can store their context if they press "save".

Status: Open
